# LOKRING® BRASS CONNECTORS TYPE 50

## 1.0 INTRODUCTION

The purpose of this document is to give technicians all information necessary about the solder-free LOKRING® tube connection technology in general and especially about brass LOKRING® connectors type 50.

## 2.0 AREAS OF APPLICATION

### LOKRING® BRASS CONNECTORS TYPE 50 ARE BEING USED IN:

- ⊖ Air conditioning systems (split, multi-split, VRF, HVAC)
- ⊖ Commercial product refrigeration
- ⊖ Heat pumps
- ⊖ Solar thermal energy
- ⊖ Geothermal energy

## 3.0 COMPONENTS OF A LOKRING® CONNECTION

### JOINT (1)

The shape of the brass joint to be used is defined by one of the many types, sizes and repair situations.

### RING (2)

The steel rings are electro galvanized, thick film passivated and Chrome VI free. Up to a diameter of 12,7 mm (1/2"), the rings are pre-assembled on the joint when delivered.

### STABILISATION INSERT (3)

Brass stabilisation inserts bring additional safety into the LOKRING® connection by increasing the necessary pull-out

force. They also help correct slight ovality found in coiled line sets.

Stabilisation inserts must always be used for LOKRING® brass connections type 50. In case of a wall thickness > 1.5 mm please contact us.

### LOKPREP (4)

LOKPREP is an important component of the LOKRING® connection technology. LOKPREP will compensate for any unevenness in the tube surface such as longitudinal grooves or surface porosity, thus ensuring that every LOKRING® connection is hermetically sealed.

### LOKTOOL MZ-V (5)

The hand assembly tool reduces the manual force needed during assembly. The assembly jaws are easy to exchange to match the size of the LOKRING® to be fitted.

### LOKTOOL MB (6)

The assembly jaws fit the hand assembly tools LOKTOOL MZ and MZ-V. They can be replaced quickly and easily, thus making LOKRING® assembly possible with only one tool for different tube diameters. 9 different sizes are available to cover the whole diameter range from 6 to 41,3 mm (1/4" to 1 5/8").

### LOKPRESS (7)

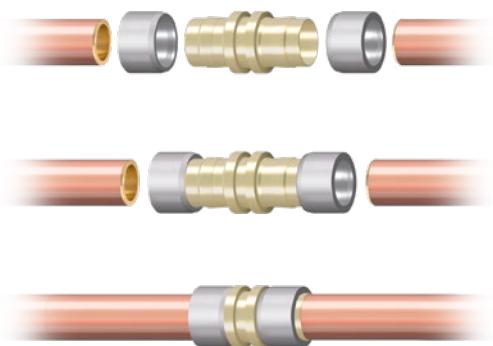

The cordless assembly tool enables the fast and safe processing of type 50 LOKRING connections with a diameter of 6 to 41,3 mm (1/4" to 1 5/8"). The assembly jaws move together when the start button is pressed.

Until the force has been built up, i.e. until the start of assembling, the assembly tool switches to automatic mode until the LOKRING® connection has been pressed completely. A special hydraulics valve and an electronic monitoring system guarantee safe assembly.

# LOKRING® BRASS CONNECTORS TYPE 50

## 4.0 FUNCTIONAL PRINCIPLE

The LOKRING® tube connection works on the basis of »simple« physical laws. It consists of two rings and one tubular joint which takes the two tube ends. During assembly, the tube ends are inserted into the joint to the inner limit. Then an assembly tool is used to push the two rings axially onto the joint. Due to the conical inner contour of the rings and the special outer and inner contour of the joint, the diameter of the joint is reduced during assembly so that the tube and the joint form a metallic hermetic connection through surface contact.

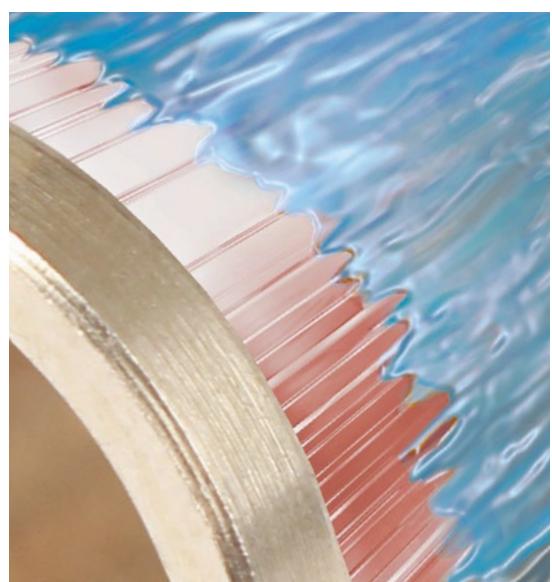

The lifetime gas-tightness of the fitted connection is ensured by the state of permanent elastic pre-tension, which is produced by the balance of the radial forces acting in opposite directions from tube to ring.

## 5.0 LOKPREP (ANAEROBIC SEALANT)

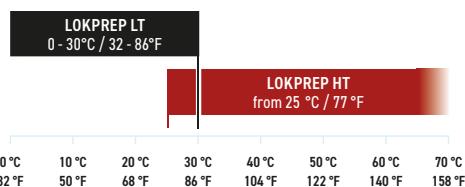

Metal tubes can have longitudinal grooves on the surface from production. These production related faults can be compensated quite easily by moistening the tube ends to be connected with LOKPREP fluid before assembly. Thanks to its capillary characteristic, it can even flow into microscopic cavities and fill these out completely.

LOKPREP is not an adhesive, rather an anaerobic sealant which hardens under oxygen exclusion and in contact with free metal ions. Its elastic structure is permanently retained in a temperature range of -50°C to 150°C (-58°F to 302°F), thus compensating material-specific deformations due to fluctuations in temperature. Since LOKPREP does not contain solvents which have to evaporate during hardening, the finished connection is ready for use shortly after assembly.

## 5.1 TYPES OF LOKPREP

Since LOKPREP's curing time depends on the ambient temperature, two fluids exist for the LOKRING® brass connections types 50. The curing time of the LOKPREP LT has been optimally matched to ambient temperatures up to 30°C (86°F). LOKPREP HT develops its optimum characteristics only at temperatures above 25°C (77°F).

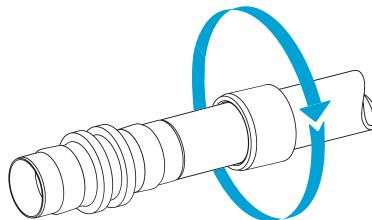

## 5.2 SPREADING THE LOKPREP

CHECK THE EXPIRY DATE BEFORE APPLYING LOKPREP. ALWAYS MAKE SURE THAT THE WHOLE TUBE CIRCUMFERENCE IS MOISTENED WITH LOKPREP.

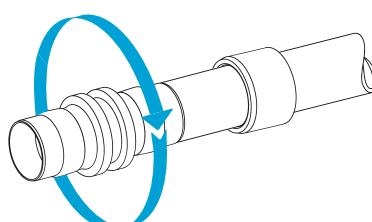

### POSSIBILITY A

Rotate the moistened tube through 360° inside the joint.

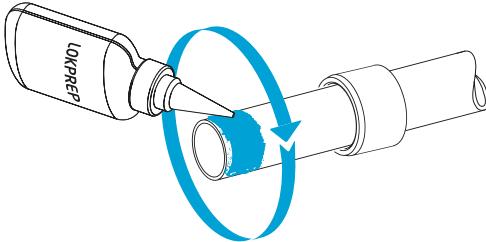

### POSSIBILITY B

Rotate the joint through 360° around the end of the tube.

### POSSIBILITY C

Move the nozzle 360° around the tube to distribute the LOKPREP evenly.

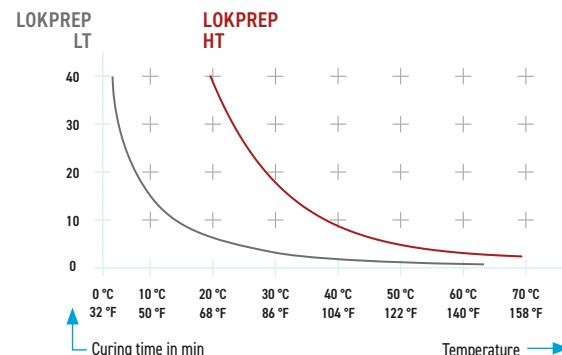

# LOKRING® BRASS CONNECTORS TYPE 50

## 5.3 CURING TIME

Always make sure that the LOKPREP is properly cured before exerting any force on the LOKRING connection by moving, turning or bending the tube.

LOKRING assemblies at an ambient temperature below 0°C (32°F) should be avoided, as the proper curing of LOKPREP cannot be guaranteed.

If installation at temperatures below 0°C (32°F) cannot be avoided, it must be ensured that the joint is heated to above 0°C (32°F) after installation. However, the temperature due to heating must not exceed 100°C (212°F).

## 6.0 TECHNICAL SPECIFICATIONS AND APPROVALS OF THE LOKRING CONNECTION

**Reference standards:** EN 378-2 and ISO 14903

**Max. operating pressure:** 75 bar (1088 psi)

**Admissible refrigerants:** Suitable for all HFCs and mixtures, all HCs, R32, HFO and CO<sub>2</sub>\*.

Not suitable for NH<sub>3</sub>.

**Temperature range:** -50°C up to 150°C (-58°F up to 302°F)

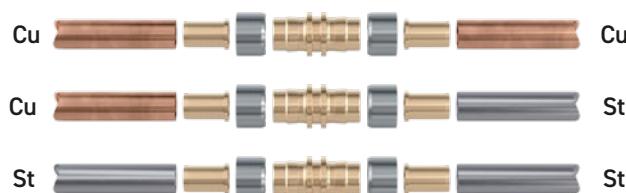

**Tube diameter range:** 6 to 41,3 mm (1/4" to 1 5/8")

**Minimum tube wall thickness:** 0.7 mm

**Approvals:** TÜV, UL (File SA12004)

\* Up to the max. operating pressure specified for each connector.

## 7.0 MATERIAL COMBINATIONS\*

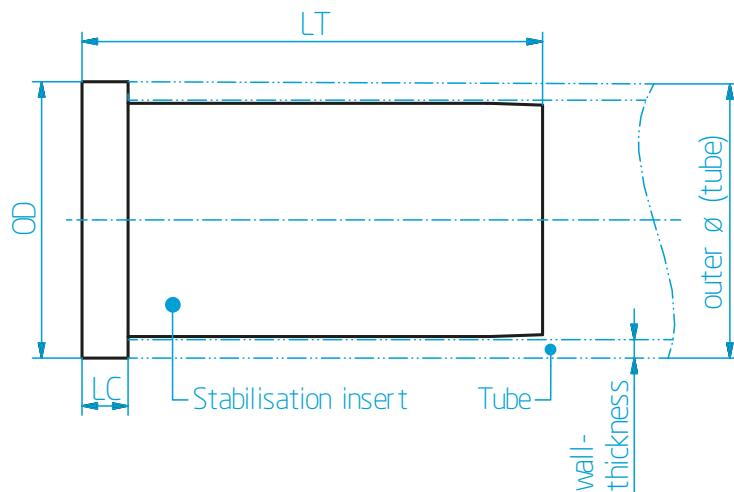

\* Other material combinations on request.

# BRASS STABILISATION INSERT AND SPECIFICATION FOR COPPER TUBE

## 8.0 PRODUCTS SUITABLE FOR AN EXTENDED OPERATING PRESSURE RANGE

**Introduction:** All products in this chapter are suitable for applications with an operating pressure of up to 75 bar (1088 psi) including subcritical CO<sub>2</sub> applications.

# 90° COPPER ELBOWS

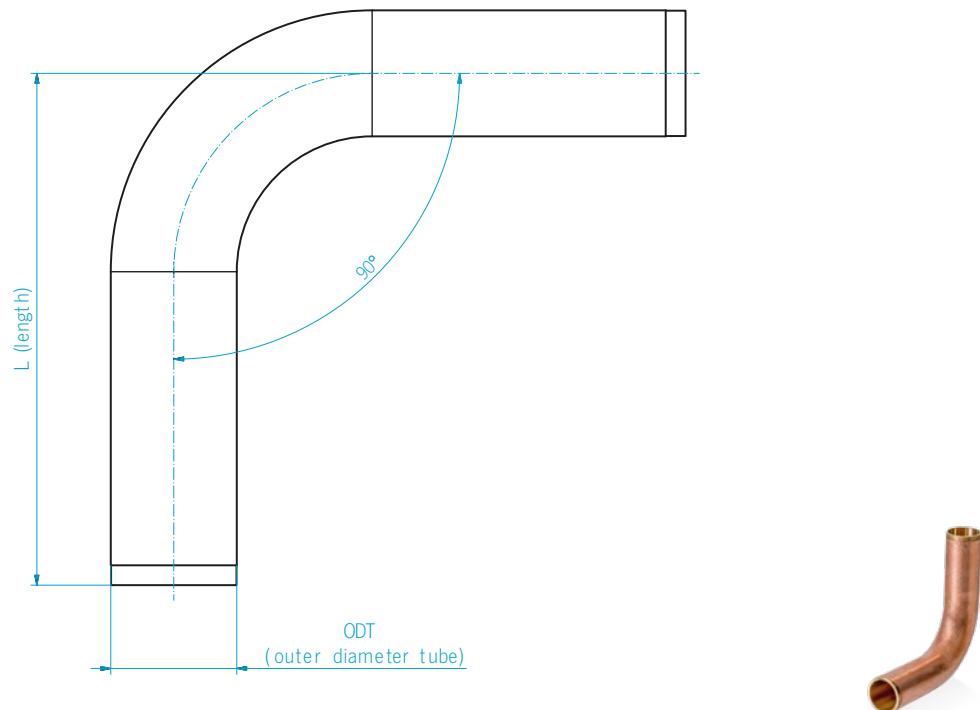

## 9.0 PRODUCTS SUITABLE FOR A STANDARD OPERATING PRESSURE RANGE

**Introduction:** The products in this chapter are suitable for all standard applications. Respect the maximum operating pressure for each product as stated.

### 9.1 90° COPPER ELBOWS (LOKRING CU 90-EB)

In accordance with EN 12735-1. Max. operating pressure: 50 bar (725 psi)

Supplied with the necessary stabilisation inserts.

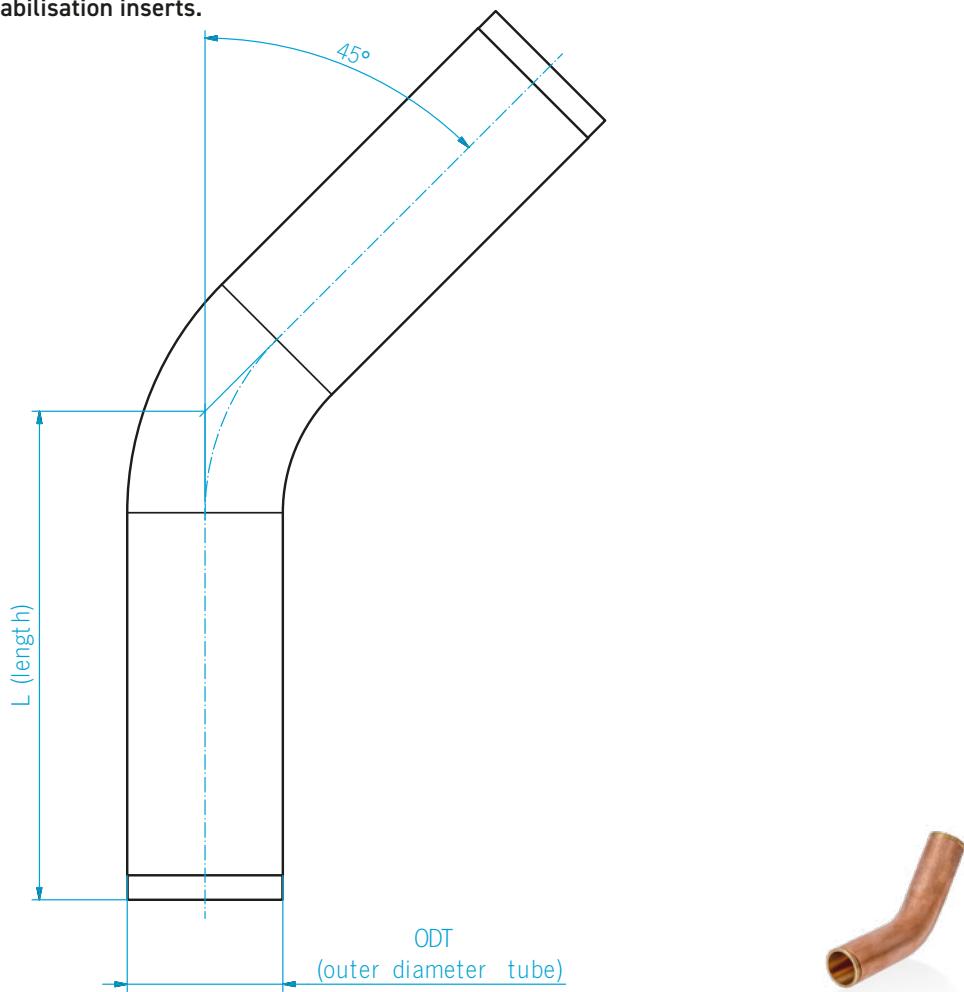

Article no.	Article name	Dimension		Notes	
		ODT

# DECLARATION REGARDING PASSED TESTS

## 10.0 DECLARATION REGARDING PASSED TESTS

**VULKAN**

**VULKAN**  
**LOKRING**

### Declaration regarding passed Tests according EN 16084:2011 (meanwhile replaced by ISO 14903:2017)

In the time frame of: August to October 2014

tests on tube joints according EN 16084:2011 have been performed at or on behalf of:

VULKAN Lokring  
Rohrverbindungen GmbH & Co. KG  
Heerstraße 66  
44653 Herne, Deutschland

The joints consisted of:

copper tube of following sizes:

Ø1/4" (6.35 mm) x 0.8 mm; Ø3/8" (9.53 mm) x  
0.8 mm; Ø15.00 mm x 1 mm; Ø5/8" (15.88 mm) x  
0.8 mm; Ø22.00 mm x 1.00 mm; Ø1 3/8"  
(34.92 mm) x 1.3 mm.

joined by:

LOKRING brass connectors with steel rings of  
appropriate size for applications up to 75 bar  
operating pressure

using:

LOKPREP LT

As parameters an operating pressure of 75 bar and a temperature range of -40°C to 140°C  
have been chosen.

The test-plan according to the standard includes:

Tightness-test, preparatory  
Vacuum-test\*  
Pressure-temperature-test  
Vibration-test  
Freezing-test  
Pressure-test  
Fatigue-test  
Tightness-test, terminatory

\*The procedure of the vacuum-test according to the parameters of the standard is controversial.  
Corresponding comments have been given to the standardization organization and have been  
confirmed by a member of the corresponding workgroup. A revision of the standard is planned. Due to  
this the vacuum-test is omitted until further notice.

VULKAN Lokring Rohrverbindungen GmbH & Co .KG assures that all test are performed  
carefully and according the actual interpretation of the standard and that the involved  
equipment is adequate for the performed tests.

The tested samples after running through the load tests have met the requirements of tightness  
control level A1 (hermetic joints, max.  $7.5 \cdot 10^{-6}$  mbar·l/s Helium at 10 bar and 20°C).

01.03.2018, Thome  
Date Development Manager

# NOTES

A large grid of small dots on a white background, intended for handwritten notes.

# NOTES

---

A large grid of small dots, intended for handwritten notes or sketches. The grid consists of approximately 20 horizontal rows and 30 vertical columns of dots.

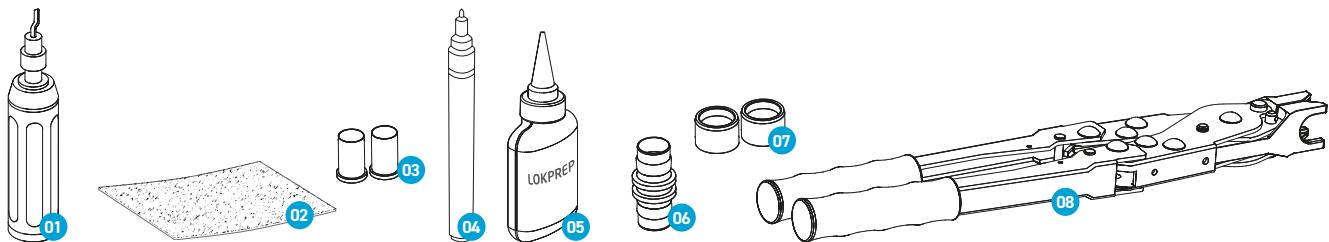

## ASSEMBLY INSTRUCTIONS

### LOKRING® tube connection assembly version 50

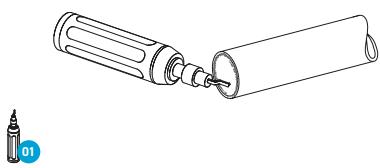

(The assembly version is determined on the basis of the last two figures in the article name. Example: LOKRING 6 NK Ms 50)

# VULKAN

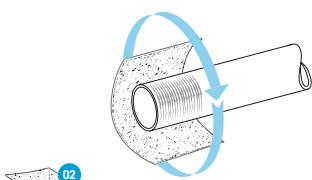

**01.** Tube deburrer   **02.** Abrasive mat   **03.** Stabilisation inserts   **04.** Permanent marker   **05.** LOKPREP  
**06.** Joint   **07.** LOKRINGS   **08.** Hand assembly tool with assembly jaws MB EVP

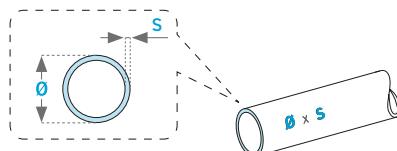

**!** Deburr the tube end all the way round using a tube deburrer (01). **Use different deburring tools for different materials.**

**!** Clean the tube end by rubbing it in rotary movements using the abrasive mat (02).

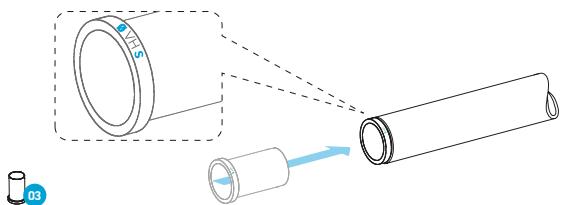

**!** Determine the tube wall thickness **S** and the outer tube diameter **Ø** on the basis of tube coding or using a slide gauge.

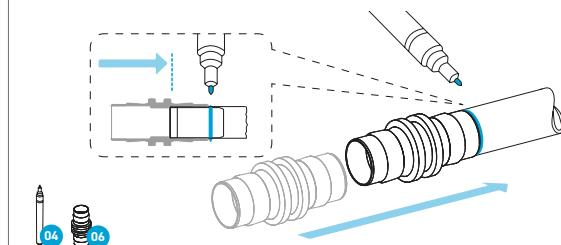

$\emptyset$  = outer tube diameter   **S** = tube wall thickness

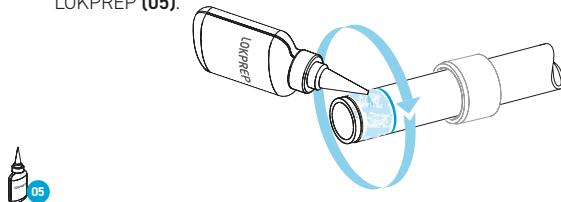

**1** Insert a stabilisation insert (03) suitable for the material, the outer tube diameter **Ø** and tube wall thickness **S**. Stabilisation inserts (03) may not be necessary in case of use with refrigerants with an operating pressure lower than 25 bar (e.g. R134a car A/C systems or refrigerator cabinets).

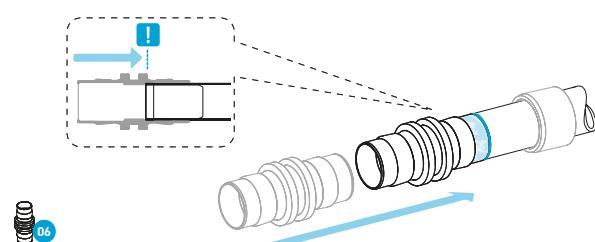

**2** Before applying the LOKPREP (05), push the joint (06) onto the tube until you can feel the inner stop. Mark (04) the correct insertion depth on the tube.

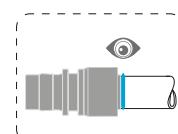

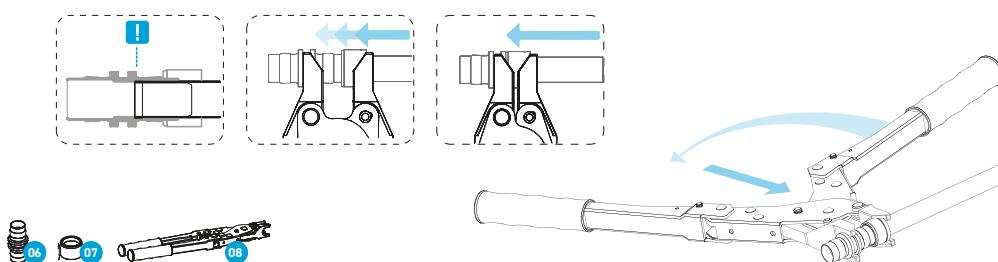

**3** Choose the correct LOKPREP (05) for the tube material and the ambient temperature. Apply LOKPREP (05) all the way round the sealing area of the tube end. Respect the correct curing time of the LOKPREP (05).

**4** Push the joint (06) onto the tube until it reaches the inner stop **!**

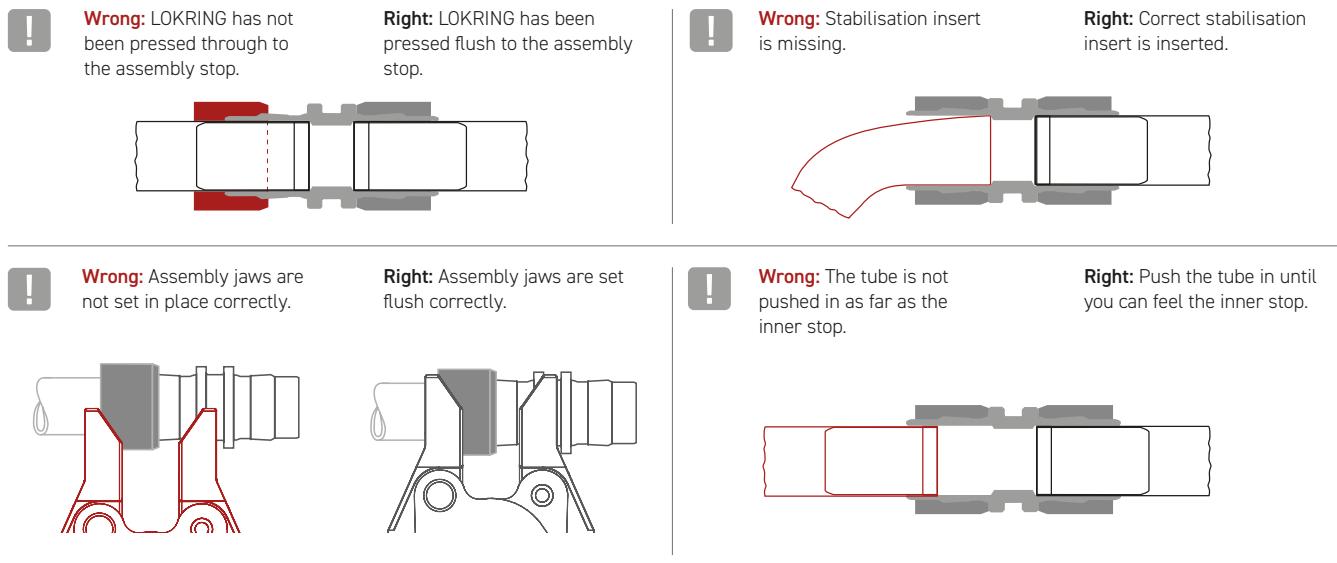

**5** Put the assembly jaws (08) in place behind the LOKRING (07) and the assembly stop of the joint (06). Press the tube connection together. **!** Do not change the insertion depth of the tube and joint (06). Press the tube connection until the LOKRING (07) is flush to the assembly stop of the joint (06). Respect the curing time of the LOKPREP (05) before applying forces to the connection.

Check the correct assembly/insertion depth on the basis of the position marking.

## EXAMPLES AS ASSEMBLY AID

## CHOOSING THE STABILISATION INSERT

\*Use Ms stabilisation inserts for copper tube and Al stabilisation inserts for aluminium tube.

**Note:** Stabilisation inserts must not be used inside an NRA adaptor or inside the stainless steel tube of a EURO flare-fitting.

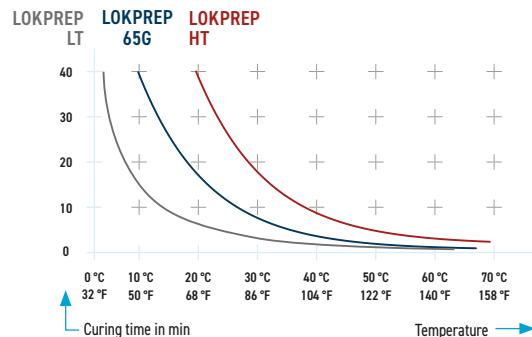

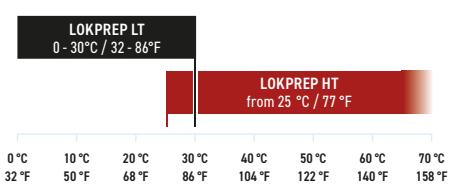

## CHOOSING THE LOKPREP

- Use an **aluminium LOKRING connector** and **LOKPREP 65G** for all connections from aluminium to aluminium or aluminium to copper. Always use a heat shrink sleeve for connections from aluminium to copper in order to protect the connection against corrosion.
- Use a **brass LOKRING connector** and **LOKPREP LT** or **LOKPREP HT** for all connections from copper to copper.

The following diagram shows the suitable temperature ranges for **LOKPREP LT** and **LOKPREP HT**.

LOKRING assemblies at an ambient temperature below 0°C (32°F) should be avoided, as the proper curing of LOKPREP cannot be guaranteed. If installation at temperatures below 0°C (32°F) cannot be avoided, it must be ensured that the joint is heated to above 0°C (32°F) after installation. However, the temperature due to heating must not exceed 100°C (212°F).

**VALIDITY CLAUSE**

The LOKRING® tube connection technology represents a proven method of producing hermetically sealed metal-to-metal tube connections. The LOKRING® tube connections are mainly used in the refrigeration and air conditioning industries. The use of LOKRING® tube connection technology in other fields is to be discussed with VULKAN Lokring. VULKAN Lokring as the supplier is responsible for the qualitative delivery of the tube connections and tools which are ordered.

The purchaser is responsible for the use of the LOKRING® tube connections and tools as directed. The assembly has to be done accordingly to the instructions and exclusively with original LOKRING® parts. The present submittal shall replace all previous editions. The data contained in this submittal refers to the valid state of affairs in time of the copy deadline. Any changes due to technical progress are reserved.

**Status:** 07/2024

All duplication, reprinting and translation rights are reserved. Further remarks for the LOKRING® assembly are available on request.
